Milton,  
I have attached a paper that Jeff Seeman and I prepared. Jane Lewis had the following question about the current method used to analyze acetaldehyde. This refers to the yellow highlighted section on page 4. Jane asked if the current method would measure anything containing a carbonyl ( $C=O$ ). I asked Jeff Sampson, and he said that although the instrument is calibrated with acetaldehyde, the method might measure any carbonyl ---- he was not sure. Jane suggested that I ask you and Susan.
